M3000

Fold, Insert and
Seal Your Mail in
a Single Pass

HASLER

America's better choice.®

THE M3000 IS UP TO 20 TIMES FASTER THAN MANUAL PROCESSING

Are you tired of the tedious task of folding, stuffing and sealing envelopes by hand? Hasler's M3000 Folder/Inserter is an easy-to-use, economical solution. The M3000 simplifies the process so virtually anyone can handle the task quickly and efficiently. And it's up to 20 times faster than manual processing!

Collate, fold, insert and seal up to five inserts in a single pass

This highly versatile, automatic folder/inserter system boosts productivity by enabling you to process mailings at a rate of 2,200 filled envelopes per hour. The M3000 folds, inserts and seals documents up to five pages – stapled or loose. Now you can automate all your mailings, including letters, checks, cards, invoices, statements and marketing materials, even pre-folded flyers!

PowerFold® 5 technology produces professional results

With PowerFold® 5 folding technology built into the M3000, you can collate up to five pages of varying sizes in any order and tri-fold the entire set to fit neatly into an envelope for a clean, professional presentation. All documents accumulate before folding, which eliminates lost pages and keeps sets in the right order. Sharp, crisp folds include C, Z, single and double parallel.

- **Extremely quiet** - works right from the desktop without disrupting business
- **Easy to use** - all automatic job set-up with "Fill and Start" feature
- **Flexible** - three configurations to fit your specific needs
- **High capacity** - FlexFeed® feed trays hold up to 325 sheets
- **Programmable** - pre-program up to nine different jobs for quick recall
- **Versatile** - handles various paper sizes, as well as daily mail applications

Multiple configurations for maximum flexibility

The M3000 can be configured with 1 1/2, 2 or 2 1/2 stations to meet your specific needs. The document feeders can handle multiple sheets up to legal size paper. The half station is a dedicated feeder for short inserts such as business reply envelopes (BRE) and business reply cards (BRC). You also have a choice of three exits – right side, left side or catch tray – to accommodate virtually any office environment. In every configuration, the M3000 has a small footprint so it requires little desktop space.

Suitable for small runs and a variety of applications

Hasler's FlexFeed[®] feed trays are designed to handle different document sizes and thicknesses so there's no need to purchase separate feeders. This makes it easy to switch applications for small runs and allows for a variety of applications to be automated.

Incredibly easy to operate – just "Fill and Start"

For occasional applications or novice users, the "Fill and Start" feature allows you to simply load your documents and envelopes and run the job. The M3000 automatically calculates the size of the documents and sets the correct fold. Operation for the whole system is monitored from a single

screen and a control panel with only 6 buttons. The system automatically stores your "Fill and Start" settings when switched off, or you can permanently store those settings to one of the nine pre-programmed jobs for future recall.

Central control panel with user-friendly interface.

Double Document Detection (DDD) system guarantees mail integrity

All feed stations of the M3000 are equipped with Double Document Detection (DDD). State-of-the-art electromechanical sensors measure actual material thickness rather than paper density using light to ensure the correct number of inserts is fed from each feeder. This technology provides superior accuracy regardless of the color or thickness of paper, including BRE, BRC and pre-folded documents.

Optical Mark Recognition (OMR) available on 2 1/2 station

Hasler's optional Optical Mark Recognition software allows the folder/insertor to process sensitive jobs with varying numbers of pages easily and accurately. Hasler's unique IntelliRead[™] software option enables the printer to generate the OMR marks necessary to perform these mailings.

The combination of these state-of-the-art features prevents you from sending personalized documents to the wrong addressee.

HaslerFlash makes service easy

With HaslerFlash software the M3000 can be connected to a PC or laptop, allowing service technicians to download the latest software versions and upload machine performance reports. The result is optimum machine performance and quicker system recovery to minimize downtime and maximize productivity.

Quick and easy access

The genuine clamshell design gives you quick, safe and simple access into the insert area. If a stoppage occurs, it can be easily and quickly cleared.
